Report No. 11-5E, supported by the U.S. Air Force Medical Logistics Agency, under Work Unit No 60334. The views expressed in this article are those of the authors and do not reflect the official policy or position of the Navy, Department of Defense, or the U.S. Government. Approved for public release; distribution is unlimited. This research has been conducted in compliance with all applicable federal regulations governing the protection of human subjects. No human subjects were directly involved in this research.

Executive Summary

The Naval Health Research Center (NHRC) has used its modeling and simulation (M&S) expertise to develop and update conventional U.S. Air Force medical assets since 2004. Air Force medical modeling capabilities currently capture care and treatment of the sick and injured from the first responder through theater hospitalization.

The objective of this study was to leverage medical M&S advantages to provide recommendations for allowance standard (AS) configurations based on the Air Force Expeditionary Medical Support +25 (EMEDS+25) operational and clinical requirements. NHRC analysts reviewed the EMEDS+25 Unit Type Code (UTC), analyzed clinical requirements with subject matter experts, and used M&S tools to develop an updated operationally-based and patient-driven recommended 938C line list.

The UTC capabilities, operational requirements, and materiel solutions were identified, addressing issues of modernization, clinical requirement, standardization, and redundancy. In this study, important enhancements were made to meet clinical, modernization, and standardization needs. In addition, redundant items were identified and proposed for deletion. In summary, the updated AS for the EMEDS+25 shows a recommended weight, cube, and cost for each clinical functional area.

Modeling a medical system like the EMEDS+25, with a range of capabilities and functional areas, validates the materiel solutions for each UTC. It is effective in facilitating AS reviews that focus on advancing the mission, operational requirements, and capabilities of these agile, deployable medical resources.

Introduction

The Naval Health Research Center (NHRC) has used its modeling and simulation (M&S) expertise to develop and update U.S. Air Force medical capabilities, allowance standards (AS), and surgical subspecialty Unit Type Codes (UTC) since 2004. Air Force medical units must remain small, light, and flexible. Based on the success of previous work, the Air Force asked NHRC to conduct a study of the Expeditionary Medical Support +25 (EMEDS+25) (Konoske, 2009). This report details the clinical, medical materiel, and staffing requirements to support an EMEDS +25.

The U.S. Air Force Medical Services are faced with a wide range of potential scenarios, from providing war fighters forward resuscitative care, to assisting civilian populations during humanitarian relief operations. Air Force planners and UTC developers have closely followed the *Joint Vision 2010* concept of providing highly mobile medical resources that have a minimal logistic footprint, without compromising capability (Office of the Joint Chiefs of Staff, 1998). Additionally, guidance provided by the *Joint Vision 2020* calls for a more scientific approach that leverages existing information technologies to support modern operational capabilities (Office of the Joint Chiefs of Staff, 2000). Emphasis on mobility and capability result in a modular approach to prepare, plan, and deploy the EMEDS+25.

Method

The NHRC method of modeling medical supply requirements was developed to establish and/or review medical inventories for various levels of care. The aim is to give clinicians in the field the needed materiel to provide the best care possible, while still maintaining as small a logistical footprint as possible. This is accomplished through a process that begins with the identification of likely patient types to be encountered by a particular type of medical treatment asset, including combat wounds, non-battle injuries, and illnesses. *International Classification of Diseases*, Ninth Revision (ICD-9) coded patient conditions that have been selected by the Defense Medical Materiel Program Office are used for this purpose. Figure 1 illustrates the NHRC processes used when developing an M&S package.

Figure 1. An example of the NHRC AS review process.

Subject Matter Expert Guidance

Subject matter expert (SME) input is essential to the refinement and validation of assumptions regarding equipment and supply associations, and the range and scope of patient types.

Patient Stream

To determine the initial supply and equipment requirements, NHRC analysts developed a scenario depicting the range and types of patients that would be seen and treated at a deployed military treatment facility. The Patient Condition Occurrence Frequency (PCOF) tool is used to generate a patient stream that is comprehensive in both the range of patient types and the frequency at which they present. The EMEDS+25 scenario was chosen as representative for this study. Using a Poisson process and the rates provided by the PCOF tool, the patient stream was developed to realistically emulate the medical demands consistent with the chosen scenario.

Using a 7-day patient stream, medical supplies for EMEDS+25 were generated using the Enterprise Estimating Supplies Program (EESP), with an average throughput of 294 patients were selected for a 7-day period. Due to the random nature of the Poisson process, the number of selected patient types rarely exactly matches the number of patients in the chosen scenario, but is representative of the stochastic nature of patient presentations.

Expeditionary Medical Knowledge Warehouse

The patient stream is input to the Expeditionary Medical Knowledge Warehouse (EMedKW) program to perform M&S. EMedKW is composed of the EESP, the Tactical Medical Logistics Planning Tool, and the Re-Supply Validation Program. EMedKW is a service-oriented architecture system designed to protect and organize medical data. EMedKW provides the ability to estimate the equipment and consumable items needed to treat a particular patient distribution, while also tracking inventory to monitor mission readiness. Within EMedKW, the tasks required to treat each injury or illness are identified and matched with the required equipment and consumable items. Analysis and review of the output informs the appropriate modifications to the line list for review.

The following example illustrates this data structure (see Figure 1). Here, ICD-9 code 800.00—a closed fracture of the skull vault, without intracranial injury—is being treated in the USMC service branch, at the Forward Resuscitative Care medical echelon, and in the triage/pre-operative functional area. The task profile specifies several steps, among which is “Insert Endotrach Tube.” Execution of this step requires specific medical equipment and supply items, a few of which are listed here.

Figure 2. An example of NHRC's modeling process with ICD-9 code 800.00.

Findings

Emergency Room

A model of the Air Force Emergency Room (ER) supplies and equipment package was built for the EMEDS+25 ER. This allowance standard augments an already existing robust ER capability. The patient stream was used to simulate the materiel requirements for the range of pre-surgical cases and non-surgical injuries and illnesses that would typically be seen and treated by an EMEDS+25 ER in a 7-day period. The patient stream is shown in Appendix A.

Capabilities

This UTC provides personnel and equipment for 24-hour operations, to include complex medical/surgical nursing care for non-life threatening situations, emergency medical services response, Advanced Cardiac Life Support, Advanced Trauma Life Support procedures, and minor surgical stabilization procedures. Staffing is shown in Table 1.

Table 1
ER Staffing

AFSC description	AFSC	Qty
Emergency services physician	044E3	1
Clinical nurse (emergency)	046N3J	1
Aerospace medicine technician CFMN	4N051/4N071	3

Quantity Differences

There are no medications or durable line items in the 938CA AS. There are no changes in the equipment. The most notable difference was a reduction in blankets from seven to one.

Clinical requirements called for line items from other functional areas within the EMEDS+25 938C. The bulk of the consumables were drawn from the 938CK Logistics and all medicinals were drawn from the 938CE Pharmacy functional area (FA). These requirements are included in the overall EMEDS+25 model. Quantities called for from these other FAs will be aggregated in a separate line-item list.

Recommended changes to EMEDS+25 ER AS are based on clinical requirements. The resultant recommended changes produce a 1% decrease in overall weight, a 20% decrease in volume (cube), and a 15%, or \$395, cost decrease when compared to the existing AS. Modeled cost for the EMEDS+25 ER is \$2,200. Table 2 shows an overview of the changes by category. A detailed listing of the ER AS recommended changes is provided in Appendix B.

Table 2
ER Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost
938CA equipment	42.50	3.43	\$951.85
EESP equipment	42.50	3.43	\$951.85
Difference	0.00	0.00	\$0.00
Percent change	0.00%	0.00%	0.00%
938CA consumables	45.68	19.00	\$1,649.98
EESP consumables	46.31	21.10	\$1,630.43
Difference	\$0.63	\$2.10	-\$19.55
Percent change	1.38%	11.05%	-1.18%
938CA totals	88.18	22.43	\$2,601.83
EESP totals	88.81	17.90	\$2,206.12
Difference	0.63	-4.53	-\$395.71
Percent change	0.71%	-20.20%	-15.21%

Anesthesia, Operating Room, Central Sterile Supply

A model of the Air Force Anesthesia, Operating Room (OR), and Central Sterile Supply (CSS) supplies and equipment package was built for the EMEDS+25 OR. This allowance standard augments an already existing, robust OR capability. The patient stream was used to simulate the materiel requirements for the range of surgical cases that would typically be seen and treated by an EMEDS+25 OR in a 7-day period. The patient stream is shown in Appendix C.

Capability

A second operating table and lights, anesthesia machine, and additional surgical equipment and supplies are provided at this increment. The OR is capable of performing 20 major surgeries or 20 non-operative trauma resuscitations in 72 hours. The second operating table requires an additional 100 square feet of space for a second operating team. The two operating room tables are located adjacent to each other. The EMEDS Surgical Augmentation Team (UTC FFEP5) provides five additional surgical personnel to support two full operating teams. Staffing is shown in Table 3.

Table 3
Surgical Augmentation Team Staffing

Position title	Air Force specialty code	Qty
Surgeon	045S3	1
Nurse-anesthetist	046M3	1
Operating room nurse	046S3	1
Surgical service craftsman	4N171	2

CSS is located adjacent to the OR and is responsible for issuing and storing small instrument sets for use in the intensive care unit, emergency medicine, dental, medical ward, and flight medicine areas. These sections are responsible to pick-up and return their own instruments.

Quantity Differences

There were no items recommended for deletion or addition based on the EMEDS+25 AS. There are 12 individual line-item changes. Two of these items are recommended decreases, AA batteries from 24 to one and cartridge infusors from five to one. Ten line-items are recommended increases, for example splinting materiel from one to 15 and gel foam from one to two packages. Examples of standardization of materiel are found in the osteotomes that are also present in the AS for the Maxillofacial surgical sub specialty UTC and wrapper, sterilization, green 36x36 green found in a range of surgical UTCs to include the EMEDS+10 and the Maxillofacial surgical sets.

No changes in the equipment category, for weight, cube, or cost were realized. Of the 322 items studied, 258 are equipment. There are no medicinal line items carried in these ASs. All medications are obtained through the EMEDS+25 Pharmacy FA.

Consumable items increased modestly in weight, cube, and cost. Table 5 provides an overview of the changes in the AS by category. Detailed AS changes for Anesthesia, OR and CSS are provided in Appendices D, E, and F, respectively.

Table 4
Anesthesia, OR, and CSS Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost
938C AS equipment	1345.32	192.03	\$246,161.94
EESP equipment	1345.32	192.03	\$246,161.94
Difference	0.00	0.00	\$0.00
Percent change	0.00%	0.00%	0.00%
938C AS consumables	192.52	56.28	\$28,686.05
EESP consumables	233.22	61.40	\$34,863.45
Difference	40.70	5.13	\$6,177.40
Percent change	21.14%	9.11%	21.53%
938C AS total	1537.84	248.31	\$274,847.99
EESP total	1578.54	253.43	\$281,025.39
Difference	40.70	5.13	\$6,177.40
Percent change	2.65%	2.06%	2.25%

Ward

A model of the EMEDS+25 Ward was built with input from clinical SMEs. The core AS (938CS) was augmented using supplies and equipment primarily from the Logistics and Pharmacy FAs within EMEDS+25. For this scenario, a robust patient stream was developed using the PCOF tool and patient occurrence data from Operation Iraqi Freedom.

Capability

The Ward at the EMEDS+25 configuration provides 25 inpatient beds capable of giving medical and dental care for 7 days in an austere environment without re-supply. The Ward is staffed with an additional two clinical nurses, two aerospace medicine

journeymen, and one aerospace technician superintendent. Total nursing staff consists of six clinical nurses and 17 aerospace technicians. Table 6 shows the total nursing staff, including the EMEDS+25 nursing staff augment.

Table 5
Ward Staffing

Position title	AFSC	Qty
Clinical nurse	046N3	6
AE technician superintendent	4N091	1
Aerospace medical services	4N051/4N071	16

The Ward is heavily reliant on the presence and availability of medical supplies and materiel from other FAs within EMEDS+25—most notably from the Logistics and Pharmacy. The requirements drawn from these FAs provide the necessary additional medication and medical materiel typically required for the Ward FA.

The patient stream represents the scope and range of patients appropriate for this level of care. A total of 85 patients, representing 56 ICD-9 codes, were treated during the 7-day scenario. The scenario keeps with the tactics, techniques, and procedures for EMEDS+25, and assumes that patient medical evacuation is readily available and hold times are minimal. The patient stream is shown in Appendix G.

Quantity Differences

There are no recommended additions or deletions for the 938CS. Sodium chloride irrigation fluid is the only recommended increase for medications. Consumables decreased by almost 33%, primarily due to fewer exam gloves. The weight, cube, and cost differences across the categories are found in Table 7. Appendix H provides a detailed listing of each line item, and reports the status and recommended quantities based on the scenario.

Table 6
Ward Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost
938CS equipment	2057.02	220.75	\$175,457.26
EESP equipment	2057.02	220.75	\$175,457.26
Difference	0.00	0.00	\$0.00
Percent change	0.00%	0.00%	0.00%
938CS medications	75.84	8.00	133.61

Category	Weight (lbs)	Cube (cu ft)	Cost
EESP medications	108.84	11.00	158.09
Difference	33.00	3.00	\$24.48

938CS consumables	178.36	43.05	7480.05
EESP consumables	154.02	29.07	5015.13
Difference	-24.34	-13.98	-\$2,464.92
Percent change	-13.65%	-32.48%	-32.95%
938CS total	2311.22	271.80	\$183,070.92
EESP total	2319.88	260.81	\$180,630.48
Difference	8.66	-10.98	-\$2,440.44
Percent change	0.37%	-4.04%	-1.33%

Laboratory

The EMEDS+25 Laboratory equipment and supplies were modeled using EESP. The EMEDS+25 Laboratory (938CF) AS builds upon the EMEDS Basic AS and EMEDS+10 Laboratory AS. One laboratory officer (043T3A) and one additional laboratory technician (4T051) provides more depth in this FA.

Capabilities

The EMEDS+25 Laboratory performs comprehensive laboratory procedures and basic microbiology. An additional chemistry analyzer provides multiple chemistry analyses in a 13-test panel.

Quantity Differences

There are no Laboratory recommended deletions. Two items are recommended increases: the test blood disc for the Piccolo from one to five packages, and the panel basic metabolic for use with the Piccolo from one to two packages. Seventeen items are recommended to decrease. The most significant recommended decreases are the culture medium MACC by 5 bottles and culture medium Mueller-Hinton blood agar by five packages.

The 938CF decreased in cost by \$500, weight by 2%, and cube by 6.5%. A comprehensive analysis is shown in Table 8. The specific changes are listed in Appendix I.

Table 7
Laboratory Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost
938CF equipment	860.81	54.99	\$43,184.36
EESP equipment	860.81	54.99	\$43,184.36
Difference	0.00	0.00	\$0.00
Percent change	0.00%	0.00%	0.00%
938CF consumables	166.57	94.22	\$7,971.94
EESP consumables	143.82	84.38	\$7,462.96

Percent change	-13.66%	-10.44%	-6.38%
938CF totals	1027.38	149.21	\$51,156.30
EESP totals	1004.63	139.38	\$50,647.32
Difference	-22.75	-9.84	-\$508.98
Percent change	-2.21%	-6.59%	-0.99%

Pharmacy

Capability

The EMEDS+25 Pharmacy FA provides greater infrastructure and materiel support to the clinical FAs than the EMEDS Basic Pharmacy. The EMEDS+25 Pharmacy is capable of storing and dispensing medications, enough for a 10-day period, and is staffed with a pharmacist (043P3). The pharmacist is responsible for maintaining and accounting for all medications.

Quantity Differences

There were significant changes recommended based on the patient stream's clinical requirements. Each clinical FA has a requirement for medications to be administered. The Pharmacy materiel requirements were aggregated across the clinical FAs within EMEDS+25.

There were 212 medications in this study. Of the 212 medications, 46 were recommended to be increased, while 89 were recommended to be decreased. The operational requirement for 12 medications did not exist, and those have been recommended for deletion without replacement.

The medications not modeled include five used for tobacco cessation, which is not considered an operational requirement in the EMEDS+25 tactics, techniques, and procedures. Also removed were two medications used as prophylaxis against HIV transmission due to occupational exposure to blood. Aspirin 325 mg is recommended as a deletion because of the coagulation complications in the critically injured. Aspirin 81 mg for use in cardio pulmonary resuscitation is a recommended addition. Table 11 provides a weight, cube, and cost analysis of the Pharmacy FA. A detailed line list is in Appendix J.

Table 8
Pharmacy Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost

EESP total	734.16	161.42	\$67,318.49
Difference	-411.34	-75.83	\$6,510.28
Percent change	-35.91%	-31.96%	10.71%

Logistics

Capability

The Logistics component of EMEDS+25 provides a segregated, environmentally controlled storage area for medical materiel and augments the EMEDS Basic resupply

capability. This capability is also responsible for the maintenance and repair of the medical equipment organic to EMEDS+25. The biomedical repair equipment personnel are included in the staffing and are materially supported in EMEDS Basic; most of the tools used in biomedical repair are maintained and carried by the technicians, and not part of the ASs within the EMEDS systems. The Logistics FA is also staffed with personnel responsible for maintaining the reconstitution of clinical areas in EMEDS.

Quantity Differences

There were noteworthy changes in the Logistics AS based on the supported FAs' resupply and materiel needs. The total requirement was based on the aggregated materiel needs of all the clinical FAs within EMEDS+25. As with EMEDS Basic, if the materiel requirements of line items exceeded the amounts available in the clinical FAs, these items were called from Logistics. Unlike EMEDS Basic, items like pajamas, robes, or bedding were not increased because laundry facilities are either organic to EMEDS+25 or obtained on a contractual basis. Table 12 is a summary of the weight, cube, and cost analysis. A detailed listing of the Logistics AS is provided in Appendix K.

Table 9
Logistics Weight, Cube, and Cost Analysis

Category	Weight (lbs)	Cube (cu ft)	Cost
938CK equipment	104.57	13.26	\$1,253.39
EESP equipment	104.57	13.26	\$1,253.39
Difference	0.00	0.00	\$0.00
Percent change	0.00%	0.00%	0.00%

Difference	14.42	0.52	\$168.75
Percent change	51.92%	8.00%	26.27%
938CK total	132.35	19.80	1895.77
EESP total	146.78	20.32	2064.52
Difference	14.42	0.52	168.75
Percent change	10.90%	2.64%	8.90%

Conclusion

M&S was used to study the range of FAs and ASs in the EMEDS+25. A representative patient stream was developed to represent the type and frequency of patients likely to be seen at this level of care for each functional area.

M&S tools are essential for projecting appropriate medical care needs for our service personnel. Standardizing equipment and consumables with the Defense Medical Material Program Office-approved items, and against a wide-range of Air Force assets, makes the EMEDS+25 more efficient. Updating and maintaining the patient data and EMEDS+25 contents database will ensure that future medical needs are met in the most effective manner.

REPORT DOCUMENTATION PAGE

The public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB Control number. **PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.**

1. REPORT DATE (DD MM YY) 28 03 11	2. REPORT TYPE Technical Document	3. DATES COVERED (from - to) Feb 2008–Dec 2010
4. TITLE Air Force Operational Medicine: Using the Enterprise Estimating Supplies Program to Develop Materiel Solutions for the Expeditionary Medical Support (EMEDS). Volume Four: EMEDS+25		5a. Contract Number: GS-09K-99BHD 5b. Grant Number: 5c. Program Element Number: 5d. Project Number: 5e. Task Number: 9T7SDGIS006 5f. Work Unit Number: 60334
6. AUTHORS Hopkins, Curtis; Nix, Ralph; Vern Wing; Brown, Carrie		
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Commanding Officer Naval Health Research Center 140 Sylvester Rd San Diego, CA 92106-3521		8. PERFORMING ORGANIZATION REPORT NUMBER Tech Doc No. 11-5E
9. SPONSORING/MONITORING AGENCY NAMES(S) AND ADDRESS(ES) Commanding Officer Naval Medical Research Center 503 Robert Grant Ave Silver Spring, MD 20910-7500		10. SPONSOR/MONITOR'S ACRONYM(S) NMRC/BUMED 11. SPONSOR/MONITOR'S REPORT NUMBER(s)
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution is unlimited.		
13. SUPPLEMENTARY NOTES		
14. ABSTRACT <p>The Naval Health Research Center (NHRC) has used its modeling and simulation expertise to develop and update conventional U.S. Air Force medical assets since 2004. The objective of this study was to leverage medical modeling and simulation advantages to provide recommendations for allowance standard (AS) configurations based on the U.S. Air Force Expeditionary Medical Support +25 (EMEDS+25) operational and clinical requirements.</p> <p>NHRC analysts reviewed the EMEDS+25 Unit Type Codes (UTCs), analyzed clinical requirements with subject matter experts, and used modeling and simulation tools to develop an updated operationally-based and patient-driven recommended 938C line list. The UTC capabilities, operational requirements, and materiel solutions were identified, addressing issues of modernization, clinical requirement, standardization, and redundancy. In this study, important enhancements were made to meet clinical, modernization, and standardization needs. In addition, redundant items were identified and proposed for deletion. The updated AS for the EMEDS+25 shows a weight, volume (cube), and cost for each clinical functional area.</p>
